The scatter plot displays the relationship between the number of years since the 1980 census (x-axis) and the percentage of the population aged 65 and over (y-axis). The x-axis ranges from 0 to 20, and the y-axis ranges from 10 to 20. The data points, represented by small squares of various colors, show a strong positive linear correlation. A regression line is drawn through the data points, indicating that the percentage of the population aged 65 and over increases steadily over time.

A collection of small, multi-colored squares scattered across a white background. The squares are in various colors including blue, orange, cyan, magenta, green, teal, purple, red, brown, yellow, and pink. They are distributed in a seemingly random pattern, with some clusters and many empty spaces. The squares are small and uniform in size, appearing as discrete data points or a decorative scatter plot.
