

Page 1 — Introduction

Welcome to the VaultPDF test document. This page contains introductory content used to verify that the thumbnail panel correctly identifies and highlights the first page when the document is loaded.

Page 2 — Getting Started

This is the second page of the document. It is used to verify that scrolling to page two updates the sidebar's active thumbnail and Viewing badge from page one to page two.

Page 3 — Core Features

This is the third page. This page is specifically chosen to test mid-document navigation — clicking thumbnail three should bring the main canvas to this page and the sidebar should auto-scroll to keep this thumbnail visible.

Page 4 — Advanced Topics

Page four is used to validate the "only one thumbnail is active at a time" invariant. After navigating here, exactly one thumbnail should carry the `data-active="true"` attribute and the Viewing badge.

Page 5 — Conclusion

The final page. This page is placed far enough down the sidebar thumbnail list to verify that the sidebar panel itself scrolls to bring the page-5 thumbnail into view when the main canvas is scrolled to the end.
